Summary

Completed degree in Computer Science at Egerton. I am competent in front-end software development and hardware. I am a self-driven person and can work well under pressure.

Experience

- I completed an intensive course with Cyber Shujaa in Cloud and Network Security, where I gained expertise in securing digital assets and communication channels in cloud computing and network environments. I developed skills in security monitoring, incident response and secure development practices,ensuring alignment with industry standards and emerging trends.

- Attached in Baringo County government office where my main responsibilities was to offer technical support and configuring network connections.

- Worked on personal website projects mainly front end development using HTML,CSS and integrated interactive features and functionalities using JavaScript to optimize the performance and interactivity of the websites.

- Participated in a Hackathon organized by AG-Chain and Virginia University to develop an application to help farmers to identify pests and diseases attacking their crops and take the necessary actions. Won third place in the competition.

- Worked in an device repair shop where my main responsibilities was to help the university students in resolving issues with their mobile phones and laptops, including software installation.
